DETAILED ACTION

Allowable Subject Matter

Claims 1, 2, 5-7, 10-16 and 21 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record, alone or in combination, neither teaches nor reasonably suggests a dental X-ray positioning device where there are first and second members rotatably coupled together, a first bar connected to the first member that has a bite block slidably connected to the first bar and an image receptor holder connected to the first bar and spaced from the bite block, and further having a second bar connected to the second member that is oriented essentially perpendicular to the first bar, and further where the second bar has an arm that is parallel to the first bar and further has an aiming ring slidably connected to the arm, such that the aiming ring and the image receptor holder are adjustable both vertically and horizontally with respect to each other in order to allow the center of an X-ray beam to be directed through the aiming ring and adjustable horizontally and vertically, or a means for performing that function, in the combinations as claimed in each of claims 1 and 21.

Claims 2, 5-7 and 10-16 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bolin (US 2,090,933) and Donato (US 5,119,410) teach dental positioning devices with limited degrees of freedom. Mork (US 4,907,251) teaches a dental imaging system.
